About This Game

Puzzle One is an extremely difficult casual permutation puzzle sandbox. Turn the handles to rearrange the marbles into their original state. This game is a 2D analogue of the popular 3D twisty puzzle genre, and will appeal to people interested in twisty puzzles and speed solving.

This game is very, very challenging.

Features

- 20 built in puzzles.
- Leaderboards to track fastest solves and fewest moves (average of 5 solves).
- An editor with Steam Workshop support.
- Extensive color options to avoid colorblindness issues.

Puzzle One is a sandbox. It runs like an application, and has no form of progression. All puzzles are immediately available. There is no specific goal. Figure out a difficult puzzle, or try to beat your best time on one you've mastered.

If you like trying to solve a rubik's cube this is the same style. Fun for fifty cents!. Fun puzzle game centered around speed-solving and solving efficiently. Scoreboard takes the average of five consecutive solves to remove some luck from the solves and encouraging finding better algorithms. Easy to use workshop with levels made in XML. Easily worth \$0.99 if you enjoy twisty puzzles. If you like Rubik's Cubes and other twisty puzzles, you'll like this.

Clean and simple interface, pick your puzzle, click scramble and solve either with mouse presses or hovering your mouse and using the keyboard. There is a timer too and a leaderboard tracking moves and times to solve if you're into speed solving. There's 20 puzzles to start with and workshop support so hopefully people will make more.

The editor is not friendly to beginners, you will need to know how to code in XML. There is a guide on how to do this on the community section for the game, made by the developer, but still not a simple editor to use. I would love to see the devs update this with some kind of drag n drop gui so idiots like me could make some puzzles.

It's cheap as chips, give it a go if you can spare the 71p. The app basically just opens with a list of arranged shapes, and you choose one, and then have to manually enable the scramble.

Feels a bit lacking really.

There is no satisfaction for solving the puzzle, and there is no acknowledgement when you complete it.

There is a "high score" button, but looks like it currently only acknowledges the developer's time.

It's a dollar, but can find free simple swap 'games' online for free.
